                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The GMG DNA and protein sequences of the invention are useful for treating or preventing metabolic-related disorders, such as: obesity; impaired glucose tolerance; insulin resistance; Syndrome X; Type II diabetes; hyperlipidaemia; atherosclerosis; hypertension; and heart diseases (e.g. cardiac insufficiency, coronary insufficiency or high blood pressure). The GMG DNA and protein sequences of the invention may also be used as insulin sensitisers - for improving insulin sensitivity in persons with non-insulin dependent diabetes mellitus. The present cDNA sequence encodes the human GMG-9 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        XXX00000000000000000XX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemic condition (e.g. compressive ischaemia or vasospastic ischaemia) by measuring expression levels of particular genes (ABI99202 to ABI99912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes. The expression levels or expression profiles produced by these genes are carpession indicator when screening for ischaemic condition improving drugs or therapeutics for ischaemic diseases. ABI99913 and ABI99914 creptesent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

            CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnossis and creatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased cx expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent. (CC diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic derived cells. AAK64703 co AAK87694 represent human immune/haematopoietic antigen genomic conservations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-NOV-2000

                                                       immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1363

                              Q
                                                                                                                                                AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and creatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC protein. (I) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK64950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

                                                                                                                                                                                                                      stimulating an immune response in a patient and treating pancreatic cancer in a patient. A host cell that expresses these polynucleotides is useful for determining the presence of cancer in a patient. A composition comprising the polynucleotide, its encoded protein, or an antibody that binds to the protein may be used in the diagnosts, prevention and/or treatment of diseases, particularly pancreatic cancer. The sequences of the invention are also useful in pharmaceutical compositions, e.g. vaccines, for the diagnosis and treatment of pancreatic cancer. Such compositions may be useful for inhibiting the development of cancer in a patient, or as markers for the progression of cancer. The polynucleotide sequences may also be used as probes or primers for nucleic acid hybridisation assays. ARK4460-ARK4209

The method involves the two-hybrid screening method using the HSP47 gene and a mammalian CDNA library. The present sequence is the coding sequence for a murine HSP47 interacting protein which was used in the present method. The HSP47 interacting proteins are useful for the diagnosis and treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A cDNA clone (AAT84484) codes for a human novel type alpha-1 (XVIII) collagen (AAN26327) that is expressed in multiple tissues, especially liver, lung and kidney. It was isolated from a placental cDNA library using a probe based on an unidentified collagenous protein and a probe based on mouse alpha-1 cDNA clone mc19. A claimed plasmid comprising alpha-1 collagen nucleic acid and an expression control sequence can be used to express recombinant collagen in prokaryotic or eukaryotic (especially mammalian) host cells. The collagen may be used to treat a patient suffering from a disease associated with degradation of cartilage, and for supplementing

The invention also describes the use of an anti-angiogenic fragment of endostatin comprising a domain selected from a heparin binding domain, a receptor binding domain selected from a heparin binding domain, a receptor binding domain, and exposed on alpha-helix A
Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a pinvolves detecting the level of expression of two or more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity due to the control of the

                                                                      The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC as multiple sclerosis, connective tissue disease, rheumatoid arthritis, CC disbetes mellitus, allergic rhinitis, asthma and eczema, nervous system CC disorders such as Parkinson's disease, Alzheimer's disease, Huntington's CC chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and CC wernicke disease, inflammatory disorders such as nephritis, Crohn's CC disease, ischaemia-reperfusion injury, shock, sepsis and inflammatory CC bowel disease. The sequences exhibit activity relating to angiogenesis, CC cell proliferation, cell differentiation, stem cell growth factor, CC activin or inhibin. Therefore, they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic CC cartilage, tendons and ligaments and in tissue repair and burn healing. CC cartilage, tendons and ligaments and in tissue repair and burn healing. CC Note: Some sequences for this patent did not form part of the printed CC specification, but were obtained in electronic format directly from WIPO CC at fip.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Ma

The invention relates to novel isolated polypeptides (I), and polypucleotides (II). (II) (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and other blood-related disorders (sickle cell anaemia), myeloproliferative
                                                                                                                                                                                                                                                                                   08-DEC-
                                                                                                              Claim 1;
                                                                                                                                   Novel polypeptides useful for diagnosing, prognosing disorders related to the protein disorders and neuronal disorders -
                                                                                                                                     disorders
                                                                                                                                                                                                                         Rosen

An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted CB10 1SA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RP1-302D9 is from the library RPCI-1 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. 밁 Š В Ş

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one ml3 subclone.

For a graphical representation of this cosmid analysis see: http://www.wormbase.org/db/seq/sequence?name=EGAP7;class=Sequence sequence and its

## NEIGHBORING COSMID INFORMATION

The 5' cosmid is F53B1, 200 bp overlap; the 3' cosmid is F48B9,

## NOTES:

Coding seqences below are the result of integration and manual review of the following data: computer analysis using the program Genefinder (P. Green and L. Hillier, personal communication), the large scale EST projects of Yuji Kohara (http://www.ddbj.nig.ac.jp/c-elegans/html/CE\_INDEX.html) and The C. elegans ORFeome cloning project (http://worfdb.dfci.harvard.edu/), similarity to other proteins from Blastx analyses (http://blast.wustl.edu/), sequence conservation with C. briggsae using Jim Kent's WABA alignment program (Genome Research 10:1115-1125, 2000), individual C. elegans GenBank submissions, and personal communications with C. elegans researchers tRNAs are predicted using the program tRNAscan-SE (Lowe, T.M. and Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964). /db\_xref="taxon:6239" /organism="Caenorhabditis elegans" /strain="Bristol N2" Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                 source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note. IMPORTANT: This sequence is not the entire insert of clone F57B1. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Caenorhabditis elegans

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

This sequence is the entire insert of clone Y51H4A. The true left end of clone Y43D4A is at 193825 in this sequence. The start of this sequence (1.115) overlaps with the end of sequence AL713992.

The end of this sequence (269514. .269619) overlaps with the start
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (27-OCT-1999) Nematode Sequencing Project, Sanger Institute, Hinxton, Cambridge CB10 1SA, England and Department of Genetics, Washington University, St. Louis, MO 63110, USA.
